

RunThaCity's General Sportbike Maintenance Schedule

A sportbike maintenance schedule should be based on the specific make and model of your bike, as well as your riding habits and environment. Here is a general guideline to help you create a maintenance schedule that works for you:

Monthly Maintenance:

- Check tire pressure and inspect tires for signs of wear or damage.
- Check the brakes and brake pads for wear and make sure they're functioning properly.
- Check the fluid levels of the engine, transmission, and coolant.
- Check all lights and electrical connections.
- Clean the bike, including the chain and other components, to prevent corrosion.

Quarterly Maintenance:

- Change the engine oil and oil filter.
- Check and lubricate the chain.
- Inspect the suspension system and adjust it as necessary.
- Check the battery and charging system.
- Inspect the body and fairing for any signs of wear or damage.

Annual Maintenance:

- Replace the air filter.
- Check the spark plugs and replace them if necessary.
- Inspect and adjust the valves.
- Check the suspension components and replace any worn or damaged parts.
- Inspect the entire bike for any signs of wear or damage and address any issues promptly.

Remember, these are general guidelines, and your actual maintenance schedule may vary based on your specific bike, riding habits, and environment. Be sure to consult your owner's manual or contact your local dealership for more detailed information on how to properly maintain your sportbike.
